Reasoning and Mastery – Addition and Subtraction Problems

Eva has 169 sweets in a jar. She gives 37 sweets to Mo. Which model represents this problem?

132	
37	169

169	
37	132

Rosie has 77 sweets. Mo has 121 sweets.

Which addition will find how many sweets they have altogether?

	7	7
+	1	2

	1	2	1
+		7	7

Explain your answer.

Answers

Q1 – The calculation is  $169 - 37 = 132$ . The red oval above shows the correct representation.

Q2 Both calculation are correct. With addition it doesn't matter which number you start with the answer will be the same. The answer is 198 for both.

English

The Colour of Home – Diary entry

This task will take a little longer and will be continued on Monday next week too. Before you start to write your diary entry look through all of your notes and re-read the story.

Edit and improve your plan then write your diary entry.

Look again at the targets for success we wrote and use these to help you. Make sure you include all your targets.

Answers

You have until Wednesday next week to write your diary entry!

We are going to begin looking at Hinduism for our RE work.

Visit this BBC Bitesize activity, watch the videos and have a go at the online quiz.
