Year Three 22/5/20

Maths

Remember that we're working in the tens column this week. If we're only adding or subtracting multiples of ten when we're working with three digit numbers, only the number in the tens column will change. The digits in the hundreds column and the digits in the ones column will stay the same.

Reasoning

Mastery

Spot the Mistake

Amir: 589 − 70 is equal to 582

What should the answer be?

Rosie: When I calculated 392 subtract 20 I used my known fact that 9 − 2 = 7

Explain Rosie's method.

English

Here are a list of words. What you need to do is match the prefix with the root word (the part of the word that already exists and that we're adding the prefix to) to make a new word. When you've matched the root words to their correct prefix, I'd like to put each of the words you have made into a sentence. Remember, if you make any words you don't know, use a dictionary to look up their definitions.

Foundation Subject – French

I'm going to give you some French to really challenge you this week! You need to look at the other sheet I've uploaded today. We're still looking at countries and flags so this time I'm going to give you the names of some countries in French and show you their flags. There's one problem… the flags don't have any colour on them! I'm not that cruel though, I'm going to let you colour them in and I'll even tell you what the right colours are by giving you a colour by number to do. But there's a twist… all of the colours are in French! So you'll need to translate the colours, colour the flags and find out what the English names of each country is. You're going to be French experts by the time we get back! If you can't print the sheet off, that's fine (I probably wouldn't be able to either!), you can just draw them and colour them in or just write the correct colours in the right places.
