Maths- 2-D shapes

Count the sides on 2-D shapes.

Match the shapes to the number of sides.

Did you manage to colour all four-sided shapes? Ask a grown up to check.

Pentagon - 5 sides

Rectangle - 4 sides

Square - 4 sides

Triangle - 3 sides

Hexagon - 6 sides

Problem solving

triangle,
quadrilateral,
pentagon,
octagon

The pentagon
would be third.

A hexagon would
come after the
pentagon and
before the octagon
because it has 6
sides which is
more than 5 and
less than 8.

English

Did you manage to find the adjectives and time words?

Adjectives - **blue**

Time connectives - **green**

A walk to the dene

Yesterday was a **lovely sunny** day. I asked my mam if we could go for a walk through the dene to collect some leaves and she said yes! **First** we had a **delicious** fried breakfast and **after that** we set off on our walk. We took drinks with us and some **yummy** snacks too. On the way we tip-toed across the bridge and pretended there was an **ugly** troll sitting underneath it. We were enjoying ourselves so much. **Later on** that day we collected lots of leaves then we decided to race back home. **Eventually** we reached the house. I was so tired that I fell asleep on the couch with my clothes on. It had been a **wonderful** day.
