

Spiders

Spiders can come in all shapes and sizes. Some are so small they can sit on the head of a pin; others are bigger than a grown man's hand. Though people think they are insects like bees and wasps, they are in fact arachnids. This means they have eight legs and not six.

Super Spider Facts

You can find spiders in all of the different countries in the world, apart from ones where it snows a lot.

Different Types of Spider

The largest spider in the world is the Goliath bird-eating spider. They are named after the famous giant in the Bible story of David and Goliath. They live in South America, in the rainforests. The name is a bit confusing, as they don't actually eat birds. They mostly eat worms and toads.

The smallest spider in the world is the Samoan moss spider. They are about the same size as a full stop. Even though they are tiny, these spiders are still very poisonous but their fangs aren't long enough to bite into a person's skin.

Some More Amazing Spider Facts

- There are about 40 000 species of spider in the world.
- Fear of spiders is known as arachnophobia.
- Most spiders are completely harmless to people. Only a few species are venomous.

Nearly all spiders catch their food by spinning a web that acts like a trap. This web is made from very thin but very strong silk. When insects fly into it, they get stuck and the spiders can wrap them up in even more silk. Spiderwebs are very beautiful, made up of hundreds of small shapes, and can take a spider days to make.
